About Mgmt-Ctrl

The *Quality System(s) Management (QSM)* solution was designed by a small group of Quality Management professionals who developed the foundational methodology as a result of their Quality System remediation experiences. These founders of Mgmt-Ctrl envisioned a quality management tool that could strategically target and improve the '*quality'* of the QMS content, using a business friendly and methodical approach to enable the measurement, management and improvement of product and process quality.

The principals at Mgmt-Ctrl created the Quality System(s) Management (QSM) solution to improve the quality of medical devices in the market. The Mgmt-Ctrl QSM solution is currently available to medical device companies for the implementation and utilization of analytical technology methods that facilitate the active measurement, interactive management an continual improvement of product and process quality.

Mission - It is our mission to support patient care by improving product and process quality within the medical device industry through the provision of our Quality System(s) Management (QSM) solution.

The QSM solution strategically provides the active measurement of product and process quality to identify and report the systemic constraint(s), enabling the responsible management of emerging issues and the ability to act in the facilitation of continual improvement initiatives.

We **envision** our Quality System(s) Management (QSM) solution to be capable of being utilized across the medical device industry as a common tool that provides standardized measurement, management and improvement of product and process quality.

To achieve our vision, and as a company focused on improvement through constraint identification, we are improving our ability to scale. We are developing an eQSM platform, within a *'cloud'* environment, to enable the execution and delivery of the QSM solution. This will provide the capability to provide the QSM solution broadly across industry.

o The eQSM platform will enable Mgmt-Ctrl to more effectively and efficiently fulfill our mission to improve product and process quality within the medical device industry through the provision of our Quality System(s) Management (QSM) solution.

o The eQSM platform will enable Mgmt-Ctrl to continue our journey towards our envisioned capability of the Quality System(s) Management (QSM) solution being utilized across the medical device industry as a common tool that provides standardized measurement, management and improvement of product and process quality.
